TITLE : REMOTE CONTROL SYSTEM AND RECEIVER

ABSTRACT : PROBLEM TO BE SOLVED: To provide a remote control system capable of adjusting a DP(driving position) such as a seat position so as to be suitable for each driver and capable of easily performing registering work of the DP of each driver when unlocking a door.

SOLUTION: This remote control system having the function of locking/ unlocking a door on the basis of a signal from a transmitter 101, is provided with the function of adjusting a DP on the basis of DP data corresponding to an ID code when unlocking a door and the function of registering the DP data in a memory 13 in response to the ID code when receiving the ID code from the transmitter 101 when set in a DP registrable state by turning on a setting switch 19.
